VICKY CHAUHAN

Senior React Native Developer

Ahmedabad, India | vicky114chauhan@gmail.com | +91 87801 44201 | linkedin.com/in/vicky-chauhan-developer

PROFESSIONAL SUMMARY

React Native developer with **5+ years** of experience building and shipping Android and iOS apps, most of them from the first commit to the store release. Published **10+ apps** on the App Store and Google Play across field workforce tracking, AI food delivery, POS payments, church donations and social networking. Recent focus is architecture ownership: offline-first data with Realm, background location and geofencing, real-time chat over Socket.IO, native bridges for payment SDKs, and keeping apps fast and stable through React Native upgrades. Works in TypeScript with Redux Toolkit, collaborates closely with UI/UX designers and backend developers to deliver better app outcomes, and takes part in code reviews in Agile sprints.

TECHNICAL SKILLS

Mobile: React Native, TypeScript, JavaScript, Expo, React Navigation, Native Modules (iOS/Android bridging)
State Management: Redux, Redux Toolkit, Context API
Storage & Sync: Realm, SQLite, AsyncStorage, Firebase
APIs & Real-time: REST APIs, GraphQL, Socket.IO, WebSockets
Payments: Fortis SDK, Apple Pay, Google Pay, Stripe, Klarna, Swish, Tap to Pay, Paytm
Location: Google Maps, Geofencing, Background Location Tracking
Performance: Crash debugging, render and list optimization, React Native version upgrades
Notifications: Firebase Cloud Messaging, OneSignal
Tools & Release: Git, GitHub, GitLab, Jira, Xcode, Android Studio, App Store Connect, Google Play Console

PROFESSIONAL EXPERIENCE

Devstree IT Services Pvt. Ltd. | Senior React Native Developer — Feb 2025 – Present

FieldTrack360 – Field Workforce Management Google Play | App Store

- Built the app from scratch in React Native with TypeScript and owned the full frontend architecture.
- Designed an offline-first data layer with Realm so field agents keep working without network and sync once back online.
- Implemented location tracking that runs in foreground, background and killed states on Android and iOS, with platform-specific permission handling.
- Wrote route logic that turns live and historical GPS points into attendance records, travel distance for TA/DA claims and route history.
- Set up map geofences so check-ins only succeed when an agent actually enters or leaves the assigned zone.
- Built in-app chat on Socket.IO with reconnect handling and message sync after connection drops.
- Published the app on both stores and continue to maintain it.

Desibox – AI Food, Grocery & Meal Planner Google Play | App Store

Food and grocery ordering app with AI meal planning, photo-based recipes and voice ordering.

- Built photo-to-recipe: users upload a dish photo and get the recipe, calorie details and an ingredient list they can add to cart in one tap.
- Developed an AI meal planner that creates a 7-day plan from diet and calorie goals and adds the ingredients to the cart.
- Added multilingual voice commands for ordering food and groceries; integrated an AI chatbot and personalised product suggestions.
- Moved cart handling to local state, making add/remove and checkout noticeably faster.
- Integrated Stripe, cards, Klarna, Swish, Apple Pay and Google Pay.
- Worked on the full UI redesign and released it on both stores.

ATZ Pay – Mobile POS & Payments Google Play

Point-of-sale app for shops, cafes and restaurants to take payments and run daily operations from a phone.

- Built checkout flows for cards, Tap to Pay, Apple Pay, Google Pay, Klarna, Swish, MobilePay and WeChat Pay.
- Developed product and inventory screens with live stock levels.
- Built order management so merchants can follow an order from checkout to delivery.
- Added desk and table management for restaurant billing.
- Fixed bugs and improved stability across regular releases.

Cristo+ – Church Donation App App Store

Donation app that lets members give to their church from their phone.

- Wrote a custom native bridge connecting React Native with the Fortis payment SDK on iOS.
- Implemented Apple Pay donations through that bridge, passing payment results and errors back to the JavaScript layer.
- Built the donation flow screens and handled payment states (processing, success, failure, cancelled).
- Connected the app to the backend through GraphQL APIs.

G-Auto | G-Pilot

- Fixed long-standing Socket.IO connection drops, making real-time data much more reliable.
- Integrated REST APIs for login, data sync and live updates.
- Upgraded React Native versions to stay compatible with new Android and iOS releases.
- Tracked down and fixed production crashes, bringing the crash rate down.
- Took both apps through App Store and Play Store publishing from scratch.

Workforce

- Built a dynamic form engine rendering text fields, radio buttons, checkboxes, signature pads and true/false fields from templates.
- Rendered screens and actions based on user role and CRUD permissions; managed multiple auth tokens to load role-specific data.
- Reworked data fetching and state updates to remove UI freezes on large data sets.

iWant Technologies Pvt. Ltd. | Software Developer — Sept 2023 – Jan 2025

Status365 – Event Photo & Video App

- Set up the frontend architecture for an event photo and video app.
- Integrated in-app image and video editing tools.
- Added push notifications with OneSignal and handled media downloads and file access on Android and iOS.
- Integrated the Paytm payment gateway for in-app purchases.
- Published and maintained the app on both stores.

iWant Technologies Pvt. Ltd. | Associate Software Developer — Sept 2021 – Aug 2023

Banjee – Neighbourhood Social App

- Developed the cross-platform app in React Native with JavaScript and TypeScript.
- Moved app state to Redux, cleaning up data flow between screens.
- Integrated REST APIs and third-party SDKs; built real-time updates with Socket.IO and Firebase push notifications.
- Turned Figma designs into pixel-accurate screens that work across device sizes.
- Refactored older modules to fix critical bugs and reduce technical debt.
- Worked directly with clients over Jira, Microsoft Teams and email.

iWant Technologies Pvt. Ltd. | React Native Intern — Feb 2021 – Aug 2021

- Trained in React Native and React.js and contributed to live projects, mainly on performance and UI fixes.

KEY ACHIEVEMENTS

- Published and maintain **10+ production apps** on the App Store and Google Play.
- Integrated **10+ payment methods** across food delivery, POS and donation apps, including a custom native bridge for the Fortis SDK.
- Shipped AI features to production in Desibox: photo-to-recipe, meal planning and voice ordering.
- Led React Native version upgrades and crash fixes across several live apps.

SELF-LEARNING & SIDE PROJECTS

- Built a sample full-stack application on my own, developing REST APIs and managing data in **PostgreSQL** (schema design, queries and CRUD operations).
- Working knowledge of **Python**; currently learning data engineering fundamentals such as SQL, data pipelines and ETL concepts.

EDUCATION

B.E. in Computer Engineering – Gujarat Technological University | CGPA 9.1 — 2018 – 2021

Diploma in Computer Engineering – Gujarat Technological University | CGPA 9.3 — 2015 – 2018
